

DIMALAN

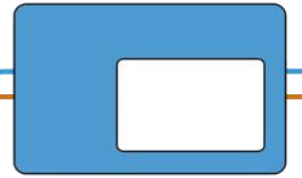

WARNING:

The patterns shown give an indication of colour. However a slight variation must be expected between dye batches, and monitors. All flame retardant materials should be kept free of dust as this may provide a fire source. Goods are offered subject to our Terms & Conditions of trading, a copy of which is available on request. We highly recommend viewing fabric samples before placing an order or manufacture.

DIMALAN

Perfect for • Masking • Stage • Blackout

Dimalan can be used for dimming light transmission. With a colour woven to a black backing, it is ideal for windows and exhibitions where a near blackout is required. Also used for main and on stage drapes in conference centres.
